MEENU V NAIR Software Engineer | .NET & Python Backend Developer

meenuvnairazhakathu@gmail.com | +91 8281901466 | Kottayam, Kerala | meenu-vnair.github.io/portfolioo

linkedin.com/in/meenu-v-nair-029775296

Professional Summary

Motivated and detail-oriented MCA graduate with knowledge of C, Python, PHP, .NET, React, and responsive web development. Skilled in MySQL, MongoDB, REST APIs, and Webhooks, with familiarity with Windows and Linux environments. Eager to apply technical skills, problem-solving abilities, and a willingness to learn to develop scalable software solutions and contribute to organizational growth.

Professional Experience

Software Engineer Trainee (Contract), *ScaleVel Technologies* 07/2026 – Present
Technologies: ASP.NET Core, C#, MS SQL Server, REST APIs, JavaScript, Bootstrap Technopark, Thiruvananthapuram

- Develop and enhance business application modules in ASP.NET Core and C#, translating functional requirements into maintainable backend logic and responsive user-facing workflows.
- Design and integrate RESTful API endpoints for application features, handling request validation, frontend-to-backend communication, and structured data exchange.
- Build and maintain Microsoft SQL Server queries, stored procedures, and relational data models to support reliable data retrieval and transactional operations.
- Integrate HTML5, CSS3, JavaScript, and Bootstrap interfaces with .NET backend services, addressing usability, responsiveness, and cross-browser issues.
- Diagnose and resolve application defects by tracing API responses, debugging C# code, reviewing SQL queries, and testing fixes in development and staging environments.
- Contribute to performance improvements by reviewing database access patterns, identifying inefficient queries, and refining application workflows.
- Collaborate with team members on feature implementation, requirement clarification, code updates, and testing to support iterative delivery of business applications.

Education

Master of Computer Application (MCA), *STAS KTM College* 09/2024 – 03/2026
CGPA: 8.1 / 10

BSc Mathematics, *BVM HC College* 06/2021 – 03/2024
CGPA: 7.5 / 10

Technical Skills

Programming Languages
C#, Python, C, PHP, JavaScript

Software Engineering
Object-Oriented Programming (OOP), Data Structures & Algorithms (DSA), Scalable Application Design, Modular Architecture

AI & Emerging Technologies
AI/ML Fundamentals, Generative AI, ChatGPT

Frameworks & Web Technologies
.NET, ASP.NET Core, React, Django, HTML5, CSS3, REST API Development, Webhooks, WhatsApp API Integration

Data & Analytics Awareness
Data manipulation, data modeling principles, structured query design

Databases
MongoDB, MySQL

Version Control & Tools
Git, GitHub, VS Code

Operating Systems
Windows

Cloud Awareness
Basic exposure to cloud infrastructure concepts (AWS / Azure)

Certifications

Tata iQ GenAI-Powered Data Analytics Job Simulation
Forage

Cyber Security Cadet – Ethical Hacking
Udemy

Crash Course on Python
Google | Coursera

Projects

HelloDoctor.Care – Doctor Appointment & Healthcare Management System
Technologies: ASP.NET Core MVC, C#, Entity Framework Core, SQL Server, HTML, CSS, Tailwind CSS, Razorpay API

- Developed a doctor appointment management system with separate admin, doctor, and patient functionalities.
- Implemented admin-side management of doctors, departments, districts, locations, subscription plans, and patient records.
- Developed doctor registration and admin approval workflows to control doctor account access.
- Implemented patient registration, login, appointment booking, and appointment history features.
- Developed consultation scheduling, appointment slot management, leave management, and token-based live queue functionality.
- Integrated webhook-based WhatsApp notifications for doctor appointment booking and confirmation, enabling communication between HelloDoctor.Care and an external webhook service.
- Integrated Razorpay payment workflows for appointment-related payments and doctor subscription renewals.
- Used Entity Framework Core and SQL Server to manage application data and implement database operations.
- Built responsive user interfaces and dashboards using HTML, CSS, and Tailwind CSS.

PyChronicle – AST-Powered Time-Travel Debugger
Technologies: Python, AST, sys.settrace(), SQLite, Textual, Typer
- Developed a Python debugging tool designed to record program execution history and inspect previous variable states.
- Used Python's AST module to analyze source code structure and identify assignment statements.
- Implemented execution tracing using sys.settrace() to monitor program execution and capture debugging information.
- Integrated SQLite for storing and retrieving execution history and variable-state information.
- Designed a command-line interface using Typer and a terminal-based interface using Textual for debugging and execution-history inspection.

College Website with IMS
Technologies: Python, Django, HTML, CSS, Bootstrap, REST API
- Developed a College Management System for student, faculty, course, attendance, and academic record management.
- Built RESTful APIs and implemented Role-Based Access Control (RBAC) for Admin, Faculty, and Student roles.
- Developed interactive dashboards and optimized database operations for efficient academic data management.

Employee Leave Management System
Technologies: C#, ASP.NET Core MVC, ASP.NET Core Web API, Entity Framework Core, SQL Server, HTML, CSS, Bootstrap, OpenAI API
- Developed an Employee Leave Management System using ASP.NET Core MVC and C# to streamline employee and leave management processes.
- Implemented CRUD operations, RESTful APIs, role-based authentication, and SQL Server database integration using Entity Framework Core.
- Built leave application and approval/rejection workflows, along with employee and leave management dashboards.
- Integrated an AI-powered chatbot using the OpenAI API and a project-specific knowledge base to answer employee queries about leave policies, application procedures, and leave statuses.
- Enabled the chatbot to retrieve employee-specific leave records from SQL Server and provide contextual responses about pending, approved, and rejected leave requests.

E-Learning Platform
Technologies: Python, Django, HTML, CSS, Bootstrap, REST API
- Developed an E-Learning Platform for course management, student enrollment, content delivery, assessments, and progress tracking.
- Built RESTful APIs with RBAC for Admin, Instructor, and Student roles.
- Implemented analytical dashboards for course, enrollment, and student performance management.
